## Why Choose Us

### QUALITY AND VALUE

RealExamFree Practice Exams are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development - no all dumps.

### TESTED AND APPROVED

We are committed to the process of vendor and third party approvals. We believe professionals and executives alike deserve the confidence of quality coverage these authorizations provide.

### EASY TO PASS

If you prepare for the exams using our RealExamFree testing engine, It is easy to succeed for all certifications in the first attempt. You don't have to deal with all dumps or any free torrent / rapidshare all stuff.

### TRY BEFORE BUY

RealExamFree offers free demo of each product. You can check out the interface, question quality and usability of our practice exams before you decide to buy.

## Customer Reviews

I wasted a lot of money and failed twice. Thanks to HPE0-J78 exam collection I pass now.

Noel

realexamfree is a reliable company. I pass exam at first shot. Many thanks

Julie

Pass BIMF.EN successfully. Really good dumps. It saves me a lot of time. Wonderful!

Ahern

online test engine is very useful for me, because i could practice the C-TERP10-67 question dumps in my phone when i was waiting or on the bus even without internet, i could make the most of my time. Last week, i passed the C-TERP10-67. so i want to share the realexamfree with you guys. hope you will get a good result in test.

Carl

**Exam :** 70-453

**Title :** Upgrade: Transition Your MCITP  
SQL Server 2005 DBA to MCITP  
SQL Server 2008

**Vendors :** Microsoft

**Version :** DEMO

NO.1 You are the administrator of your company network. You are performing the migration of an application from Microsoft SQL Server 2000 to Microsoft SQL Server 2008. You have to monitor the SQL Server instance to record the use of features that will be discontinued. So what should you do?

A.You should use the SQL Server 2008 Upgrade Advisor.

B.You should use a SQL server-side trace which captures the SQL:BatchCompleted and Exception event classes.

C.You should use the SQL Server Profiler which captures the SQL:BatchCompleted and Exception event classes.

D.You should use a SQL server-side trace which captures the Deprecation Announcement and Deprecation Final Support event classes.

Answer: D

NO.2 You are the administrator of your company network. You are in charge of checking the performance of a SQL Server 2008 instance. Now you have to identify the longest-running common language runtime (CLR) queries. So which dynamic management view should you use?

A.sys.dm\_exec\_sessions

B.sys.dm\_os\_wait\_stats

C.sys.dm\_exec\_requests

D.sys.dm\_exec\_query\_stats

Answer: D

NO.3 You are the administrator of your company network. You are in charge of a SQL Server 2008 instance. You have to make sure that the names of all user-defined stored procedures contain the prefix usp\_ on all instances. Besides this, you have to make sure that you cannot create stored procedures that do not contain this prefix. So what should you do?

A.You should create a policy that targets the name of the stored procedure that is evaluated on demand.

B.You should create a policy that targets the name of the stored procedure that is evaluated

on change.

C.You should create a condition that targets the name of stored procedure that is evaluated on demand.

D.You should create a condition that targets the name of the stored procedure that is evaluated on change.

Answer: B

NO.4 You are the administrator of your company network. You are in charge of a SQL Server 2008 instance

which is configured to use the CT1204 and CT1222 trace flags during startup. What should you do to

ensure that your failure recovery plan backs up the use of the trace flags?

A.You should backup the master database.

B.You should backup the default.trc file.

C.You should backup the resource database.

D.You should backup the SQL Server registry hive.

Answer: D

NO.5 You are the administrator of your company network. You are in charge of a SQL Server 2008 instance

which contains various SQL Server Agent jobs. The jobs use seven shared schedules to run each job

every day. You have to make sure that a job named Job1 doesn't run Wednesdays any longer. So what

should you do to achieve this?

A.You should delete the schedule for Wednesday.

B.You should disable the schedule for Wednesday.

C.You should remove the schedule for Wednesday from Job5.

D.You should add a new Job5 schedule for Wednesday and disable it.

Answer: C

NO.6 You are the administrator of your company network. Now you're in charge of a SQL Server 2008

instance.A user called Jack is running a query and he reports that he is waiting for it to complete. So you

have to identify whether the query is blocked. So which tool should you use to achieve this?

- A.You should use the Windows System Monitor tool
- B.You should use the Database Engine Tuning Advisor tool
- C.You should use the Job Activity Monitor tool in Microsoft SQL Server Management Studio
- D.You should use the Activity Monitor tool in Microsoft SQL Server Management Studio

Answer: D

NO.7 You are the administrator of your company network. You're in charge of a SQL Server 2008 cluster in a high security environment. Now you intend to configure and use encrypted connections for the clustered virtual SQL Server. You have to install the certificate which will be used for encryption. So what should you do?

- A.You should install the encryption certificate in the cluster group.
- B.You should install the encryption certificate on each individual node.
- C.You should install the encryption certificate in the cluster quorum drive.
- D.You should install the encryption certificate in the SQL Server shared disk.

Answer: B

NO.8 You are the administrator of your company network. You are in charge of a SQL Server 2008 instance. A management data warehouse uses the data collector to collect performance data. You intend to maintain the management data warehouse. You have to implement a process that routinely gathers and uploads data in the management data warehouse on different schedules. What data collection process should you implement?

- A.You should create a cached data collection.
- B.You should create a scheduled non-cached data collection.
- C.You should create an on-demand non-cached data collection.
- D.You should create two different SQL Agent jobs that are scheduled at the same time. One job creates a data collection and the other job uploads the data

Answer: A

NO.9 You are the administrator of your company network. You are in charge of three SQL Server 2008

instances named Instance1, Instance2, and Instance3. Each of them runs on a separate server.

Between Instance1 and Instance2, a mission-critical database is mirrored. At present Instance1 currently acts as the Principal, while Instance3 acts as the witness. You intend to apply a patch on both servers.

The server needs to restart itself. You have to identify the sequence of steps necessary to ensure that the

patching process is completed with the minimum time and the database is online on the partner that

currently does not apply the patch. Besides this two, you have to ensure that the database does not

failover to the other partner during this time. So what should you do?

A. You should apply the patch to the server which runs Instance2. Apply the patch to the server which runs Instance1.

B. You should apply the patch to the server that runs Instance2. Manually failover the mirroring session.

Apply the patch to the server that runs Instance1.

C. You should remove the mirroring session. Apply the patch to the server that runs Instance2. Apply the

patch to the server that runs Instance1. Re-establish the mirror

D. You should suspend the mirroring session. Apply the patch to the server that runs Instance2. Resume

the mirroring session. Manually failover the mirroring. Apply the patch to the server that runs Instance1.

Answer: D

NO.10 You are the administrator of your company network. You have to install a SQL Server 2008 instance for

a new application on an existing server. The server contains a default SQL Server 2005 instance. You

must make sure that certified third-party applications have access to their respective database instances.

You have to ensure that when you take measures to achieve this, the existing application environments

will not be changed, and you should use as little database administrative effort as possible.

So what

should you do?

A.You should upgrade the SQL Server 2005 application to use SQL Server 2008.

B.You should upgrade the SQL Server 2005 instance to a SQL Server 2008 instance.

C.You should install SQL Server 2008 as a named instance. Configure the new application to use the new instance.

D.You should install SQL Server 2008 as the default instance. Configure the new application to use the default instance.

Answer: C
